	<ul style="list-style-type: none"> ○ After opening the inhaler with the thumb grip, hold the inhaler flat and level, and slide the lever from left to right until it clicks ○ Breathe out fully through the mouth, away from the inhaler ○ Put the mouthpiece in the mouth and tighten the lips around it ○ Inhale quickly and deeply through the mouth ○ Remove the device from the mouth and hold the breath as long as comfortably possible, up to ten seconds <ul style="list-style-type: none"> ● Dry-Powder Inhaler (DPI): <i>Ellipta</i> ● Anoro Ellipta (umeclidinium/vilanterol), Arnuity Ellipta (fluticasone), Incruse Ellipta (umeclidinium), Breo Ellipta (fluticasone/vilanterol) ● <u>General steps for use:</u> <ul style="list-style-type: none"> ○ Slide the inhaler cover down to reveal the mouthpiece ○ Breathe out fully through the mouth, away from the inhaler ○ Put the mouthpiece between the lips ○ Do not block the air vents with the fingers ○ Breathe in deeply and slowly through the mouth ○ Remove the inhaler from the mouth and hold the breath for three or four seconds or as long as comfortably possible ● Dry-Powder Inhaler (DPI): <i>Handihaler</i> ● Spiriva Handihaler (tiotropium) ● <u>General steps for use:</u> <ul style="list-style-type: none"> ○ Remove the inhaler cap by pressing the piercing button ○ Expose the center chamber by pulling the mouthpiece up and away from its base ○ Place one capsule (removed from its foil blister) in the center chamber of the inhaler and close the mouthpiece until it clicks ○ Continue to hold the inhaler with the mouthpiece pointed up, press the button on the side once, then release it 		

<u>TOPIC</u>	<u>DISCUSSION/QUESTIONS</u>	<u>QUESTIONS/ANSWERS/ACTION/ FOLLOW UP</u>	<u>WHO</u>
	<ul style="list-style-type: none"> ○ Breathe out fully through the mouth, away from the inhaler ○ Place the inhaler in a horizontal position and place the mouthpiece in the mouth, tightening the lips around it ○ Breathe in deeply through the mouth and hold the breath for a few seconds ○ Remove the mouthpiece from the mouth ○ Repeat the steps starting with “Breathe out fully through the mouth” a second time ○ Open the mouthpiece, remove the used capsule, and discard it <ul style="list-style-type: none"> ● Spiriva Handihaler: Loading, puncturing, and discarding the capsule require some manual dexterity and strength, which may pose a problem for the elderly and patients with severe shortness of breath. Consider Ellipta or Respimat ● Education and repetitive demonstration are key to proper inhaler technique ● Encourage patients to bring handheld devices to appointments ● Nebulization requires minimal cognitive abilities and no hand–breath coordination, manual dexterity, or hand strength ● Combined use of a nebulizer and hand-held inhaler in the elderly may be favorable 		

March Agenda

- Accountability
- Enforcing Referral Circles
- 10 Day report follow up
- Buying screening equipment follow up
- 2016 Evaluation/2017 Topic suggestions follow up
