Note: This guideline does not apply to Medicare Members (includes dual eligible Members).

OVERVIEW

FOOD AND DRUG ADMINISTRATION (FDA)-APPROVED INDICATIONS

ViltepsTM (viltolarsen) is an antisense oligonucleotide indicated for the treatment of Duchenne muscular dystrophy (DMD) in patients who have a confirmed mutation of the DMD gene that is amenable to exon 53 skipping.

This indication is approved under accelerated approval based on an increase in dystrophin in skeletal muscle observed in patients treated with ViltepsTM (viltolarsen). Continued approval for this indication may be contingent upon verification of a clinical benefit in confirmatory trials.

DMD, a form of muscular dystrophy, is a genetic disorder characterized by progressive muscle degeneration and weakness that predominantly affects males. DMD is caused by a deficiency of dystrophin, a protein that helps strengthen muscle fibers and protect them from injury. DMD is the most severe form of muscular dystrophy and without intervention the mean age at death is around 19 years. Currently there is no cure for DMD and therapies are supportive in nature. Glucocorticoids are the only medication currently available that slows the decline in muscle strength and function in DMD. Additional benefits of glucocorticoids are reduction in the risk of scoliosis and stabilization of pulmonary function.

ViltepsTM (viltolarsen) is the third FDA-approved medication for the treatment of DMD, and second for patients who have a confirmed mutation of the DMD gene that is amenable to exon 53 skipping. Accelerated approval was based on a surrogate endpoint of an increase in dystrophin production in the skeletal muscle observed in some patients treated that was deemed reasonably likely to predict clinical benefit. A clinical benefit of ViltepsTM (viltolarsen), including improved motor function, has not been established.

COVERAGE GUIDELINES

The plan may authorize initial coverage of ViltepsTM (viltolarsen) for Members, when the following criteria are met:

Initial Therapy

1. Documented diagnosis of Duchenne muscular dystrophy with medical records confirming a mutation of the Duchenne muscular dystrophy gene that is amenable to exon 53 skipping

Note: Common Duchenne muscular dystrophy deletions that are theoretically amenable to exon 53 skipping include: 52, 45-52, 47-52, 48-52, 49-52, and 50-52.

AND

2. The prescribing physician is a neurologist or a provider who specializes in the treatment of Duchenne muscular dystrophy

AND

3. Documentation of one of the following:

- a. Member has been receiving a stable dose of corticosteroids for a period of at least 6 months
- b. Member has a contraindication to corticosteroids

Reauthorization Criteria

1. Documented diagnosis of Duchenne muscular dystrophy with medical records confirming a mutation of the Duchenne muscular dystrophy gene that is amenable to exon 53 skipping

Note: Common Duchenne muscular dystrophy deletions that are theoretically amenable to exon 53 skipping include: 52, 45-52, 47-52, 48-52, 49-52, and 50-52.

AND

2. The prescribing physician is a neurologist or a provider who specializes in the treatment of Duchenne muscular dystrophy

AND

3. Documentation of one of the following:
 - a. Member continues to utilize corticosteroids in combination with Viltepso
 - b. Member has a contraindication to corticosteroids

AND

4. Documentation that based on the prescriber’s assessment, the Member continues to benefit from Viltepso, documented by a standardized assessment of motor function or respiratory function

LIMITATIONS

- Authorizations will be provided for 6 months.
- Members new to the plan stable on Viltepso (viltolarsen) should be reviewed against Reauthorization Criteria.
- The plan will not authorize the use of Viltepso (viltolarsen) in Members with Duchenne muscular dystrophy who do not have a confirmed mutation of the Duchenne muscular dystrophy gene that is amenable to exon 53 skipping. Common Duchenne muscular dystrophy deletions that are theoretically amenable to exon 53 skipping include: 52, 45-52, 47-52, 48-52, 49-52, and 50-52.
- The plan will not authorize the use of Viltepso (viltolarsen) in combination with other disease modifying therapies for Duchenne muscular dystrophy as there no evidence to suggest combination therapy is safe or effective.

APPROVAL HISTORY

December 8, 2020: Reviewed by Pharmacy & Therapeutics Committee.

Subsequent endorsement date(s) and changes made:

1. February 9, 2021: No changes. Added information throughout the Medical Necessity Guidelines about what DMD deletions that are theoretically amenable to exon 53 skipping.

BACKGROUND, PRODUCT AND DISCLAIMER INFORMATION

Pharmacy Medical Necessity Guidelines have been developed for determining coverage for plan benefits and are published to provide a better understanding of the basis upon which coverage decisions are made. The plan makes coverage decisions on a case-by-case basis considering the individual member's health care needs. Pharmacy Medical Necessity Guidelines are developed for selected therapeutic classes or drugs found to be safe, but proven to be effective in a limited, defined population of patients or clinical circumstances. They include concise clinical coverage criteria based on current literature review, consultation with practicing physicians in the service area who are medical experts in the particular field, FDA and other government agency policies, and standards adopted by national accreditation

organizations. The plan revises and updates Pharmacy Medical Necessity Guidelines annually, or more frequently if new evidence becomes available that suggests needed revisions.

For self-insured plans, coverage may vary depending on the terms of the benefit document. If a discrepancy exists between a Pharmacy Medical Necessity Guideline and a self-insured Member's benefit document, the provisions of the benefit document will govern.

Treating providers are solely responsible for the medical advice and treatment of members. The use of this policy is not a guarantee of payment or a final prediction of how specific claim(s) will be adjudicated. Claims payment is subject to member eligibility and benefits on the date of service, coordination of benefits, referral/authorization and utilization management guidelines when applicable, and adherence to plan policies and procedures and claims editing logic.
